If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TICR, www.tigr.org; or NCBI, www.rcbi.nlm.nih, gov. When the source of t maize cDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, lowa State, then clones may be requested from ZmDB:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1 (bases 1 to 1655)

/dev stage="red ripe (7-20 days post-breaker)"
/clone_lib="tomato fruit red ripe, TAMU"
/clone_lib="tomato fruit red ripe, TAMU"
/note="Vector: pBlueScript SK(-); Site_1: EcoR1; Site_2:
Xhol; supplier: Giovannoni; Fruit were tagged at the
breaker stage (first sign of lycopene accumulation on the
blossom end of the fruit) and harvested 7 days
post-breaker (fully red-ripe), 10 days post breaker, and
20 days post-breaker (over-ripe). 20 day fruit which
showed external or internal signs of pathogenesis were
discarded. Fruit were cut in half and the seeds and
locules were discarded prior to freezing the pericarp."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    were derived from reverse transcription of mRNA samples from seeds at different stages of germination and seedlings at early phase of growth under chilling stress (130C/100C). The mRNA pool was used as template for double stranded cDNA synthesis using the Stratagene Uni-Zap XR cDNA synthesis and library sit, A total of 150,000 phages were excised from the primary library as pBluescript phagenid clones. Enrichment of the primary excised library with thillies in the content of the primary excised library with the hillies in the content of the primary excised library with the hillies in the content of the primary excised library with the hillies in the content of the primary excised library with the hillies in the content of the primary excised library with the hillies in the content of the primary excised library with the hillies in the content of the primary excised library with the hillies in the content of the primary excised library with the library with the content of the primary excised library with the library with the primary excised library with the library with the library as pBluescript.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      with chilling-induced transcripts was performed by hybridizing the primary excised library colony lifts with the PCR-select subtraction product, with cold germinated CDNA as tester and control temperature-germinated cDNA as
